America's Engineering Industry Congratulates President Biden and Vice President Harris

Engineers Are Ready to Help America Build Back Better

Washington, DC - On the behalf of America's engineering firms and the hundreds of thousands of professionals they employ, the American Council of Engineers - the business voice of America's engineering industry - congratulates President Joe Biden and Vice President Kamala Harris on being sworn into office today.

"America's engineering firms are eager to help the Biden-Harris Administration 'Build-Back-Better,' and put its capacity for innovation at the nation's disposal to enhance our infrastructure, grow the economy, address climate change, and design communities to support a more inclusive and diverse society," said ACEC President and CEO Linda Bauer Darr.

Charles Gozdziwski, ACEC Board Chair said, "We are particularly supportive of the new Administration's vision for a robust infrastructure-based recovery agenda in 2021. A package that increases long-term investments in surface transportation, aviation, drinking water and wastewater improvements, buildings, energy, rural broadband and other critical needs will help to jumpstart the nation's recovery and provide the basis for long-term economic growth."

"Engineers design public space, and as a result, we foster social interactions and our connection to each other. Restoring that connection is needed now more than ever," Darr added.

###

The American Council of Engineering Companies (ACEC) is the business association of the nation's engineering industry. Founded in 1906, ACEC is a national federation of 52 state and regional organizations representing more than 5,600 engineering firms and 600,000+ engineers, surveyors, architects, and other specialists nationwide. ACEC member firms drive the design of America's infrastructure and built environment.
